

BEES AND FLOWERS.

Made for each other

Bees need flowers as they pollen and nectar produced by flowers. Plants need bees to spread their pollen from one plant to another. By spreading pollen, plants can grow fruit and seeds.

Look at the pictures. Can you see three reasons why bees and flowers are made for each other?

Check out www.apinz.org.nz/bee-aware-month to see what makes bees and flowers a great match!

Colourful petals some with ultra violet patterns

Flowers also attract other pollinators like butterflies, birds, flies and even the wind!
